

Appl. No.: 09/730,188
Amdt. Dated: August 1, 2006
Reply to Office action of: May 31, 2006

Amendment to the Specification

Please replace the paragraph beginning at page 51, line 10, with the following rewritten paragraph:

In addition, since the mobile station wireless apparatus is equipped with a means for detecting a moving speed 13 (velocity) of this terminal, the operation of the tap coefficient monitoring unit 11 employed in the waveform equalizer of the present invention, which is mounted on this wireless apparatus, may be ON/OFF-controlled. As this means for detecting the moving speed of this terminal, such a detector may be employed which reads a speed value of a speed meter mounted on an automobile. Alternatively, when a portable terminal is used, such a detector may be used. That is, when this portable terminal is used while a user operates this portable terminal, the user may manually set a walk move to this detector.
